

**PEGASUS®**

The high-performance tension unit that is essential for attaching elastic operation.

● Elastic feed unit

The unit removes "twist" and "tangle" of elastic surely to supply elastic tape stability.

● Tension unit

Pressure-sensitive high quality sensor controls tension of elastic lace, so finish is uniform and high quality constantly

● Control panel

Separate type of control panel makes entering programs easy operation.

● Step indicator

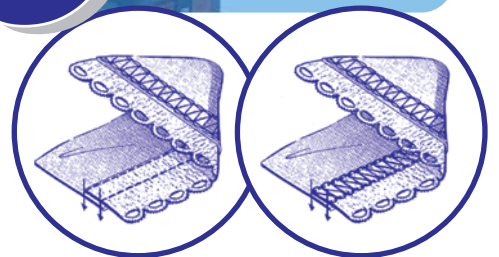

The indicator shows a step just in front of a operator, so a operator can concentrate sewing.

Tension-adjustment type elastic feeder

mu device

● High quality and uniform finish !

The tension-adjustment type elastic feeder (MU device) feeds the elastic lace according to preset data while adjusting tension exerted on the elastic lace, so achieve deskilled operation of uniform finish and quality products.

● Attaching elastic from lingerie to swim wear

99 items are programmed, 5 patterns are set up per 1 item and 16 steps of stitch counts can be entered per 1 pattern.

Tension unit can install not only at top, but side or bottom installment is available for various use.

* Maximum width of elastic is 38mm.
